Hello and welcome to this challenge! We hope you have a good time as you solve the mini games we've prepared for you.

Before you begin, you might be wondering: How do I start the game if my starting point is a PDF file?

Well, let us introduce you to something fascinating.

Polyglot Files

What's that? A file that can speak many languages?

Technically, yes!

A polyglot file is a special type of file that combines multiple formats into one. This means that the same file can be interpreted differently depending on its extension.

For example, if you create a file that is both a GIF and a RAR, it can function as an image when named file.gif and as a compressed archive when renamed to file.rar.

In cryptography, such files can be used to store encrypted data for more security.

Sounds cool, right?

Well, this very file is a polyglot of PDF and PNG!

Try changing this file's type to .png and see what happens next!

Good luck on your journey! 🚀
